Soap and Detergent Industry - Chemical Formula Services

April 21st, 2019 - SOAP amp DETERGENT INDUSTRY A detergent is a surfactant or
a mixture of surfactants with “cleaning properties in dilute solutions. Soaps, washing powders, liquid, and other chemicals act the function of removing the soil stains, oils, and greasy partials from the fibers. On the basis of water reaction, there are four types of detergents: Anionic, Cationic, Soaps, and Detergents. 

SOAPS DETERGENTS AND SURFACTANTS USDA
April 18th, 2019 - Laundry detergent formulations which have a surfactant content of 20 to 25 percent. The anionic detergent formulations ABS types derived from petroleum dominate the household detergent market because they are cheap, stable under many conditions, and are good foammers. But for several years, the use of surfactants in nondetergent applications has increased.

THE SCIENCE OF SOAPS AND DETERGENTS chymist.com
April 20th, 2019 - The cleaning action of both soaps and detergents results from their ability to emulsify or disperse water-insoluble materials, dirt, oil, grease, etc., and hold them in suspension in water. This ability comes from the molecular structure of soaps and detergents. When a soap or detergent is added to water that contains oil or other materials, it forms a micelle, which is a small, spherical aggregate of surfactant molecules. The micelle is hydrophobic on the inside and hydrophilic on the outside, allowing it to surround the oil droplet and keep it in solution.

April 9th, 2019 - The bar soap includes regular and super fatted toilet soaps deodorant and antimicrobial soaps floating soaps and hard water soaps The super fatted soaps are also made from mixture of tallow and coconut oil in ratios 50 60 40

50 All soaps contain practically 10 30 water and also contain perfume that serves to improve the original soap odor
Soap or detergents are cleansing agents that are capable of reacting with water to dislodge these foreign particles from a solid surface e.g. cloth or skin.

MAC 1138 is a water soap-based asphalt release agent designed for use in the beds of asphalt trucks. Environmentally friendly, petroleum solvent-free formulation MAC 1138 can also be used to remove dirt, grime, and aggregate build-up from machinery.

Synthetic detergents have similar molecular structures and properties as soap. Although the cleansing action is similar, the detergents do not react as readily with hard water ions of calcium and magnesium.

During the Egyptian era, 1500 B.C., various vegetable and animal oils that included alkaline salts to form a soap material were used for skin and washing. These basic soaps were the laundry detergent for ancient times.

When a dirty cloth is put in water containing soap, than the hydrocarbon ends of the soap molecule in the micelle attach to the oil or grease particles present on the surface of dirty cloth.
